

Business Intelligence Enterprise Framework (BIEF™)

Business Intelligence Enterprise Framework (BIEF™)

The Skyline Technologies' BIEF™ tool accelerates your organization's Data Warehouse (DW) development. You define your data model and metadata via the BIEF™ tool. The BIEF™ tool will then generate ETL code based on the meta-data that encapsulates industry best practices and data patterns. The end result is rapid development of a clean, consistent DW that performs.

BIEF™ Framework Key Features

BIEF™ delivers the following enterprise framework standards:

- ✔ Metadata-driven ETL code generation
- ✔ Audit & error logging
- ✔ Data Quality management
- ✔ Performance and scalability
- ✔ Dynamic flexibility

For more information on Skyline's BIEF™, other consulting offerings or support visit www.skylinetechnologies.com or call (920) 437-1360.

Key Drivers

Speed – Build data warehouses in a fraction of the time by eliminating hand-coding

Productivity - Produce better code faster using a wider range of skill sets

Consistency – Automated code generation ensures clean, consistent ETL code across all developers

Quality – The BIEF framework encapsulates proven data patterns and industry best practices for data loading

Flexibility - Quickly refactor data models to meet the changing needs of the business

Solution Deliverables

Skyline's BIEF™ application will fast-track your organization's development effort when building an enterprise data warehouse.

Skyline can also provide training to get your team started, work alongside your team, or implement the entire DW solution using BIEF™ on your behalf. You decide the right level of assistance to accomplish your business goals.
