

Skyline's SharePoint Health Check is an assessment specifically designed to ensure that you get the most out of your IT investments. We'll show you where enhancements can be made in your system to improve end user experiences, aid in compliance with company policies, mitigate security risks and offer prescriptive guidance.

The SharePoint Health Check consists of gathering and analyzing data from the SharePoint Farm, along with a findings document that points out any problem areas in the environment.

## Quick Check

Skyline's SharePoint Quick Check includes the following scope:

- Custom Web Parts
- Analysis of a single SharePoint farm
- Identification of potential architectural or configuration problems
- Documentation of risks and warnings related to Deployment Configuration, Search, Disaster Recovery and Security
- Document existing environment using the SharePoint Documentation Toolkit

## Health Check

Skyline's SharePoint Health Check includes everything in the Quick Check, in addition to:

- Interviews with your technical team to understand the environment and identify any existing issues to be aware of at the time of the Health Check
- Collection of log data for exceptions, performance and overall usage
- Delivery of the results to the client team along with discussions regarding the recommendations provided.

## Solution Deliverables

Our engineers first collect and review the data, then provide an extensive report of what issues we see in the environment. We will also call out remediation information and address issues that could become future problems.

These recommendations related to operations, configuration, and architectural issues can help you get the most from SharePoint.

For more information on Skyline's SharePoint Health Check, other consulting offerings or support visit [www.skylinetechnologies.com](http://www.skylinetechnologies.com) or call (920) 437-1360.

## Why a Health Check?

### 1. Are your SharePoint servers not performing to your needs?

Skyline will analyze performance and productivity and recommend ways to increase your SharePoint environment's effectiveness.

### 2. Are you planning to upgrade or make a major change to the environment?

Our engineers will help ensure your environment is ready for your future growth and detect problems before they become major, costly issues.

### 3. Do you have issues with SharePoint data or SQL database sizes?

Skyline can assist with reviewing the SharePoint and SQL configuration and sizing needs.

### 4. Are you missing features and functionality you expect in a normal SharePoint implementation?

Our team will verify that all features are set up and functioning as expected.

## Other Offerings

Skyline provides the following offerings:

- Health Check Remediation Engagement
- SharePoint Jump Start
- Custom Web Parts
- Forms & Workflow
- Enhanced Branding
- Custom Navigation
- Business Support Package
- SharePoint Installation
- Nintex Installation
