

## 6 Reasons to Upgrade to 2016

### 2010 No Longer Supported

As of October 2015, SharePoint 2010 is no longer supported. This means that Microsoft is no longer offering non-security hotfix support, free incident support, feature requests and design changes. Any product warranty claims are also no longer honored.

### Move to a New House

As with any move, this presents a great opportunity to discard years of outdated files and keep only relevant and pertinent information. Use this as an opportunity to split up site collections that have gotten too large, or restructure your environment in a way that makes sense for your current business needs.

### Enhanced User Interface (Including Mobile!)

Users will finally see some of the Office 365 features, such as an improved document library experience and other UI improvements, including better ways to use your data on a mobile device.

### Take Advantage of the Cloud

For many businesses, hybrid is the new on-prem. With SharePoint 2016 running in hybrid mode, you can easily integrate with Office 365 and take advantage of Groups, Delve, OneDrive for Business, Cloud Hybrid Search and more.

### Increased Speed & Stability

Microsoft has brought their SharePoint Online mindset to SharePoint 2016. They've included performance enhancements and optimization, making SharePoint 2016 faster and much more stable than previous on-premises versions.

### Continual Updates

With the new Feature Pack strategy, you will be able to quickly take advantage of the new capabilities being created by Microsoft. And with Zero Downtime Patching you don't have to have outages to deploy them!

### More Compliance Tools & DLP

Scrap your third-party Data Loss Prevention (DLP) tools as they are now included in SharePoint 2016. Also, with SharePoint Server 2016, authorization and auditing are more centralized, and e-Discovery, privacy and security are more readily available, helping you locate and manage company and customer-sensitive data.

## Do You Need SharePoint 2016?

### 1. Are you considering a move to the Cloud?

SharePoint 2016 lets you take advantage of many Office 365 features while keeping your data on-premises, allowing you to move to the cloud at your own pace.

### 2. Do you need to access your data on mobile devices?

SharePoint 2016 provides an improved mobile experience, allowing quick access to your on-premises content from many different device types and screen sizes.

### 3. Is your dated technology becoming a business liability?

Moving to the most current supported platform will alleviate any concerns about access to your business-critical information. SharePoint 2016 is a stable platform that allows for adding capabilities through Feature Packs with Zero Downtime Patching. Focus your time on adding value and new features for your organization and not just keeping the system up.

## Quick Hitters

Still need more reasons to make the switch? Here's some quick hitters:

- Increased List View Threshold
- Faster site collection creation
- 10GB file size support
- Durable links
- Character restrictions removed
- Better browser support
- New Search and content roll up options
- Enhanced Workflow actions
