

SQL Server Health Check

The Skyline's SQL Server Health Check is an offering specifically designed to give your organization's SQL Servers a regular health assessment. We'll show you where opportunities exist in your system to improve performance and reliability, aid in compliance with industry best practices, mitigate security risks, ensure maximum up time with HA/DR options, as well as offer prescriptive guidance.

Health Check Key Features

Skyline's SQL Server Health check provides your business with the tools it needs to help address the following areas in your environment

- Environmental Dependencies
- Performance
- SQL Operations
- SQL Architecture
- Monitoring
- SQL Configuration
- Event Analysis
- Security
- Other Requested Areas

For more information on Skyline's SQL Server Health Check, other consulting offerings or support visit www.skylinetechnologies.com or call (920) 437-1360.

Key Drivers

Prevention – detect problems before they become major, costly issues

Productivity – Increase your SQL server's overall effectiveness and reliability
(performance + uptime = productivity)

Decrease costs – decrease overall SQL server costs by reducing downtime, off-hours issues, and maintenance

Security – ensure that your SQL server environment is secure through a series of leading edge security tests

Sizing – ensure the amount of storage and computing horsepower is correct for what your organization needs now and ensure it's able to scale accordingly

Solution Benefits

Performing regular Health Checks can lead to more effective use of SQL Server. Skyline's SQL Server Health Check is designed to aid your IT staff who implement and maintain your SQL Servers as well as the developers who create solutions using SQL Server. Skyline will provide recommendations specific to your environment on how to maximize uptime, improve performance, and reduce overall costs of your SQL Servers.
